TRIZEd

Sept 2018 – present

TRIZEd

Business owner, Frontend/Backend Developer, Linux Engineer

TRIZEd specializes in Linux engineering and application life-cycle management. We usually work on projects that require a combination of specialized hosting skills and a deep knowledge of application development. Over the years this has resulted into a unique technology that successfully assists in cleaning and collecting large amounts of data from different sources and correlating these into actionable and usable data-feeds into other applications and systems via secure REST API communications.

Corporate Vision - The 6th Technology Innovator Awards 2021 awarded TRIZEd
Best Application Development Hosting Solutions – Amsterdam

EU Business News – Benelux Enterprise Awards 2021 awarded TRIZEd
Most innovative Application Development Services - Amsterdam

Aug 2015 – Jun 2017

DTX bv

Frontend/Backend Developer, Linux Engineer

DTX is a company that is mainly focussed around using Microsoft cloud technology. However they also maintain a CodeIgniter based application written many years ago that was being hosted on a old VPS. The way some essential parts of the application were designed and also the age of the application made it somewhat difficult to managed. I helped to change this application and make it compatible with the Microsoft cloud. I also created a solution for the back-end so that administrating the application was much faster and more convenient.

TRIZEd

Jan 2015 – Jul 2015

Pentana Solutions

Infrastructure Engineer

I helped straighten out the physical network in the Hilversum office and prepare the office to become the NOC for their operations in Europe. I also was tasked to resolve local network issues with for example the VOIP solution, printing facilities and support the network users and application developers in the office with any other issues. I assisted redeploying their office network wiring upgrading it from CAT5 to CAT6 and replaced the networks core Juniper HA switches. I also helped resolve the MPLS communication issues and realised a pro-active monitoring solution.

Sep 2012 – Aug 2014

Uniserver Internet BV

Senior System Engineer Linux, PaaS

Helped design, maintain, service, build and modify complex Linux based hosting solutions/servers for customers. From shared Plesk hosting environments to the ESX virtualisation platform and building custom cluster server configurations to investigating/resolving hacking situations. I also helped to implement a pro-active monitoring system safeguarding the many VPS hosted at the company.

Jan 2008 – Aug 2012

REVIBE Designs

Frontend/Backend Developer, Linux Engineer

I developed unique website designs for clients, built on top of the SimpleCMS system that we created in-house, which would allow to manipulate the text and images on without compromising on the design of the website. In these days this sounds pretty normal, but back in these days there was only one flavour of CMS and it made most websites look the same. REVIBE Designs also would take care of your company logo and corporate identity to match your website.

TRIZEd

Sep 2011 – Aug 2012

Hoevelaken Computers (HoeCom)

Sales Representative, Support Engineer, Linux/Windows Engineer

This was a computer store situated in a small village close to Amersfoort in the Netherlands owned by my father. We built, sold and repaired computers and were the place where people would come to buy new ink for their printers, or buy a new computer or laptop. We would help them with whatever type of software problem they might have and resolve the issue. Re-installations of laptops, personal computers and windows servers including making and restoring backups.

Mar 2004 – Aug 2012

ASI Adviesburo

Senior Network Engineer, Linux/Windows Engineer

This company was located in Amersfoort The Netherlands and also owned by my father. I helped to build and maintain the networking infrastructure and on-premises server solutions for mid-sized and start-ups up to around 50 seats. We were the phone number to call when the network printer was not working, when you can not access the email server or to remove a virus from your computer. We also rolled out the physical network infrastructure and supplied and maintained the on-premises Windows servers.

1999 – 2004

KPN, Planet Internet, UPC Chello

Helpdesk Support Engineer

During this period I have worked for mobile phone providers in The Netherlands. Providing first line and second line technical support on either the use of the mobile phone and the operator menu, or assisting people with their internet connection. I mainly did these jobs in the evenings after school and I learned how to explain very technical subjects to non-technical people.
